DETAILED ACTION

Response to Amendment

The amendment filed on February 26, 2007 has been entered and considered and an action on the merits follows.

This Office action contains newly rejections that should have been made in the previous Office action; therefore, not made final. Inconvenience to the applicant is regretted.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the drawing of “positioning means for positioning the rotating rods diagonally relative to the direction of transport of the pressing belt” (claim 1, lines 8-11 and claim 8, lines 8-1); “an electronic system” (claim 6, lines 2-3); “sensors” (claim 8, line 17); and “an evaluation device” (claim 8, line 18) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the

Art Unit: 3725

drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 10, the metes and bounds of claim 10 are unclear because it is not clear what Applicant is relying on in the apparatus claim 1 for patentability. It is suggested that claim 10 should be rewritten in an independent form with all of the limitations as claimed in claim 1 and it should be written in a method step(s) in order to conform with US practice.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3725

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 4-6 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Graf (DE 19931175) in view of Affeldt et al. (hereinafter "Aff") (US 5,492,215).

Graf discloses the invention substantially as claimed as set forth in the last Office action except for a device for detecting stretched chain links. However, Aff discloses a conveying system (fig. 1) having rotating rods (26) attached to a chain link (fig. 2) (col. 6, lines 17-19), and a device for detecting stretched chain link and controlling position of the rotating rods (col. 10, lines 56-67 and col. 11, lines 1-16). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Graf with a device for detecting stretched chain link and controlling position of the rotating rods, as taught by Aff, in order to control position of the rotating rods, thus improve the conveying of the material.

Allowable Subject Matter

Claim 8 is allowed.

The following is an examiner's statement of reasons for allowance: The art of record, considered alone or in combination, neither anticipates nor renders obvious a press comprising: *... the gears wheels being provided with marking or pulse generators to provide a gear wheel signal*, in combination with the rest of the claimed limitations.

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
